

CUSTOM AIRBRUSH TAN

Your First Custom Airbrush Application

PREPARATION:

- ★ Exfoliate the night before your Custom Airbrush Tan session to remove dry, flaky skin.
- ★ On the day of your session, avoid using bar soaps, high pH products or in-shower moisturizers. These can halt the DHA bronzing reaction.
- ★ Do not apply any lotions, moisturizers or perfumes prior to your session.
- ★ Wear dark, loose fitting clothing to your appointment. Tight clothing can rub off or smear the bronzers.
- ★ Remove all make-up and jewellery.
- ★ Female clients may wear a bathing suit, thong or whatever makes them feel comfortable. We supply disposable thongs.
- ★ Male clients must wear a bathing suit or boxers. Our technician will spray only to the thigh area and not below the waistline. *The technician has the right to refuse service.*

DURING YOUR SESSION:

- ★ The Certified Airbrush technician will help determine with you the best colour to suit your needs. The technician will guide you on how to stand in order to achieve the best results.
- ★ She will start spraying you from the bottom up. The last thing to get sprayed is the face.
- ★ After your airbrush tan is finished, the technician will dry you down with the air hose. We recommend that you air dry for 1-3 minutes before getting dressed.
- ★ The process, from start to finish, takes approximately 10 minutes for the whole body (only 5 minutes for upper body or just the legs).

MAINTENANCE:

- ★ Avoid water contact for at least 6 hours or you will stop the tanning action and/or cause streaking.
- ★ The longer you can wait to shower the better. For maximum results, wait at least 6 to 12 hours before showering or bathing. If you must bathe prior to this, use only plain water. Always gently pat your skin dry.
- ★ Sweat will cause the bronzer to streak. Avoid any activities that may cause you to sweat excessively for approximately 8 hours.
- ★ To prevent colour from fading, avoid chemically treated swimming pools and spas for at least 24 hours after your Custom Airbrush Tan session.
- ★ Avoid using bar soaps or high pH products, as they will strip and fade your tan rapidly.
- ★ Avoid using lotion directly after your session. Once you've showered, continue to hydrate your skin by using a moisturizing lotion. Applying lotion in between your sessions will extend your tan and keep your skin healthy.
- ★ Avoid exfoliating until your tan has faded or you are ready to Custom Airbrush Tan again.
- ★ Tanning in UV beds will help prolong the life of your Custom Airbrush Tan.
